RISK MANAGEMENT

A DETAILED INSIGHT TO YOUR DATA.

We take risk seriously, very seriously. Effectively managing your risk is a priority for us, we do everything we can to make sure everyone gets home safe. By partnering with Vulcan Inspection Services, you can be sure your risk is in safe hands - quite simply, we've got it covered.

Using our specially developed tools and processes, we make sure you have detailed insight into your plant and machinery. Understanding how well your equipment is performing is crucial for the safety of your business and your people.

With our approach to reporting and data analytics, we make sure you know everything you need to know about your machinery and equipment, without any delay.

eREPORT

Our online eReport tool has been developed specifically for your needs. Using the best technology, our Engineer Surveyors complete your inspection reports as they're carrying out your inspections. The completed reports are uploaded to our web server in real time so that your reports can be accessed immediately.

Using our bespoke tool, this information can be controlled, collated and analysed. A full history of your inspection reports can be found in one easy to access place, helping you track trends and assess the performance of your equipment.

Our eReport tool helps you stay on top of your inspections before they've even happened. You can view your schedule of impending examinations, quickly and easily, and can manage any actions from recently completed inspections.

Along with all of that, using eReport you can:

- View inspection reports electronically from any web connected device

- Download all data onto your own database

- Utilise scheduling functionality to co-ordinate planning of joint and/or third-party activities and the facilitation of access/egress

- Import additional documents such as test certificates, drawings, Written Schemes of Examination and reports from service engineers/repairers

- Immediately identify 'not located' and 'not available' items

- Compile and analyse historical information so that you can study past trends and anticipate them in future

- Compile and tailor bespoke MI reports

- Using the Plant and Graph functions, produce a schedule of all inspections completed as well as all inspections falling due up to a year in advance.

A soon as your inspections have been confirmed, the dates will appear alongside the relevant plant and equipment, giving you the confidence that we've got your ongoing examination schedule covered. We make sure we're transparent so that you can be sure you're safe and legally compliant at all times.

And even better, with eReport, you can be sure you're meeting the needs of the Health and Safety Executive (HSE) without having to print off paper copies of your reports.

DATA ANALYTICS

And because managing your risk effectively is so important to us, we've taken things to whole other level. Using your data, we can give you the most sophisticated and detailed insight into your plant and equipment. Our MI reports are truly industry leading and help you manage your business risk like never before.

In addition to the information you can access via eReport, our data analytics team can provide you with reports highlighting:

- Inspection locations and number of inspections completed

- All defects by location, helping you see where machinery maintenance might need reviewing, for example

- Inspection outcomes in the current year, including:
  Clear inspections
  Observations
  Time qualified defects
  Immediate defects

- All PNA's (Plant Not Available) with top locations and reasons

- Items not yet inspected

- Defects by manufacturer and plant type
